1. Project Title

Lost&Found Platform - A Web Application for Reporting and Finding Lost Items.

2. Introduction

The Lost&Found Platform is a web-based application designed to help individuals report lost or found items, search for their belongings, and claim items found by others.

3. Objective

- To develop a platform where users can:
 - Report lost or found items
 - Search items using filters
 - View item details and contact the finder
 - Track the status of their reports
 - Administer and manage reports efficiently

4. Features

User-Side:

- Sign up/Login
- Report Item (lost or found)
- Search Items with filters

Lost&Found Platform - Project Report

- Item Details View
- Claim Item Functionality
- My Reports Dashboard

Admin-Side:

- View all user reports
- Approve/Reject/Mark as Resolved
- Manage users

5. Technologies Used

- Frontend: HTML, CSS, JavaScript
- UI Tool: Adobe XD
- Optional Backend: Firebase / Node.js + MongoDB

6. Wireframe & Prototype

Core pages wireframed using Adobe XD: Login, Signup, Dashboard, Report Item, Search Page, Item Details, My Reports, Admin Dashboard.

7. User Flow

1. User Registers/Login
2. Reports or Searches Items
3. Views Item Details & Claims
4. Admin Reviews & Confirms Claims
5. User Tracks Status

8. Challenges

- Designing intuitive UX
- Ensuring clarity between lost and found flows

Lost&Found Platform - Project Report

- Planning for backend scalability

9. Future Improvements

- Real-time chat
- Map-based search
- Mobile app version
- Notifications

10. Conclusion

The Lost&Found Platform provides a structured, digital solution for reuniting people with their lost items. It improves recovery chances and streamlines the process.
